SOUNDCAM BIONIC M

The Advanced Modular Sound Camera

What is SoundCam?

SoundCam Bionic is a modular acoustic camera that images sound. The device locates sound sources in realtime and immediately displays the results on the screen. It is as easy to use as a smartphone.

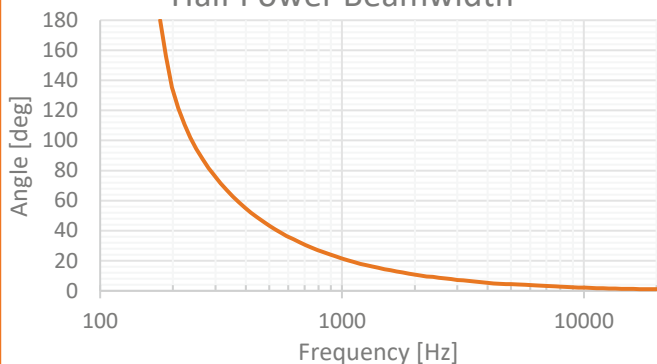

The SoundCam Bionic M microphone array has a diameter of 100 cm and consists of 112 microphones. It is designed for use in the far field and can also be used in the near field from 40 Hz. The optimized microphone arrangement guarantees perfect results.

The seven detachable microphone arms are locked and held by magnets and guarantee a very fast setup and a small packing volume.

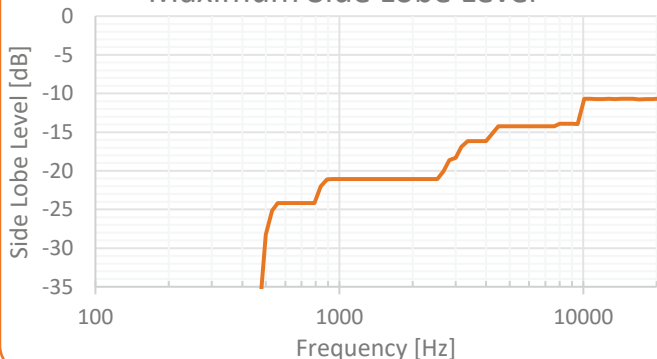

The carrying handle on the device and the integrated rechargeable battery make the SoundCam Bionic M suitable for mobile use.
